

YOUR STYLE. YOUR FLOOR.

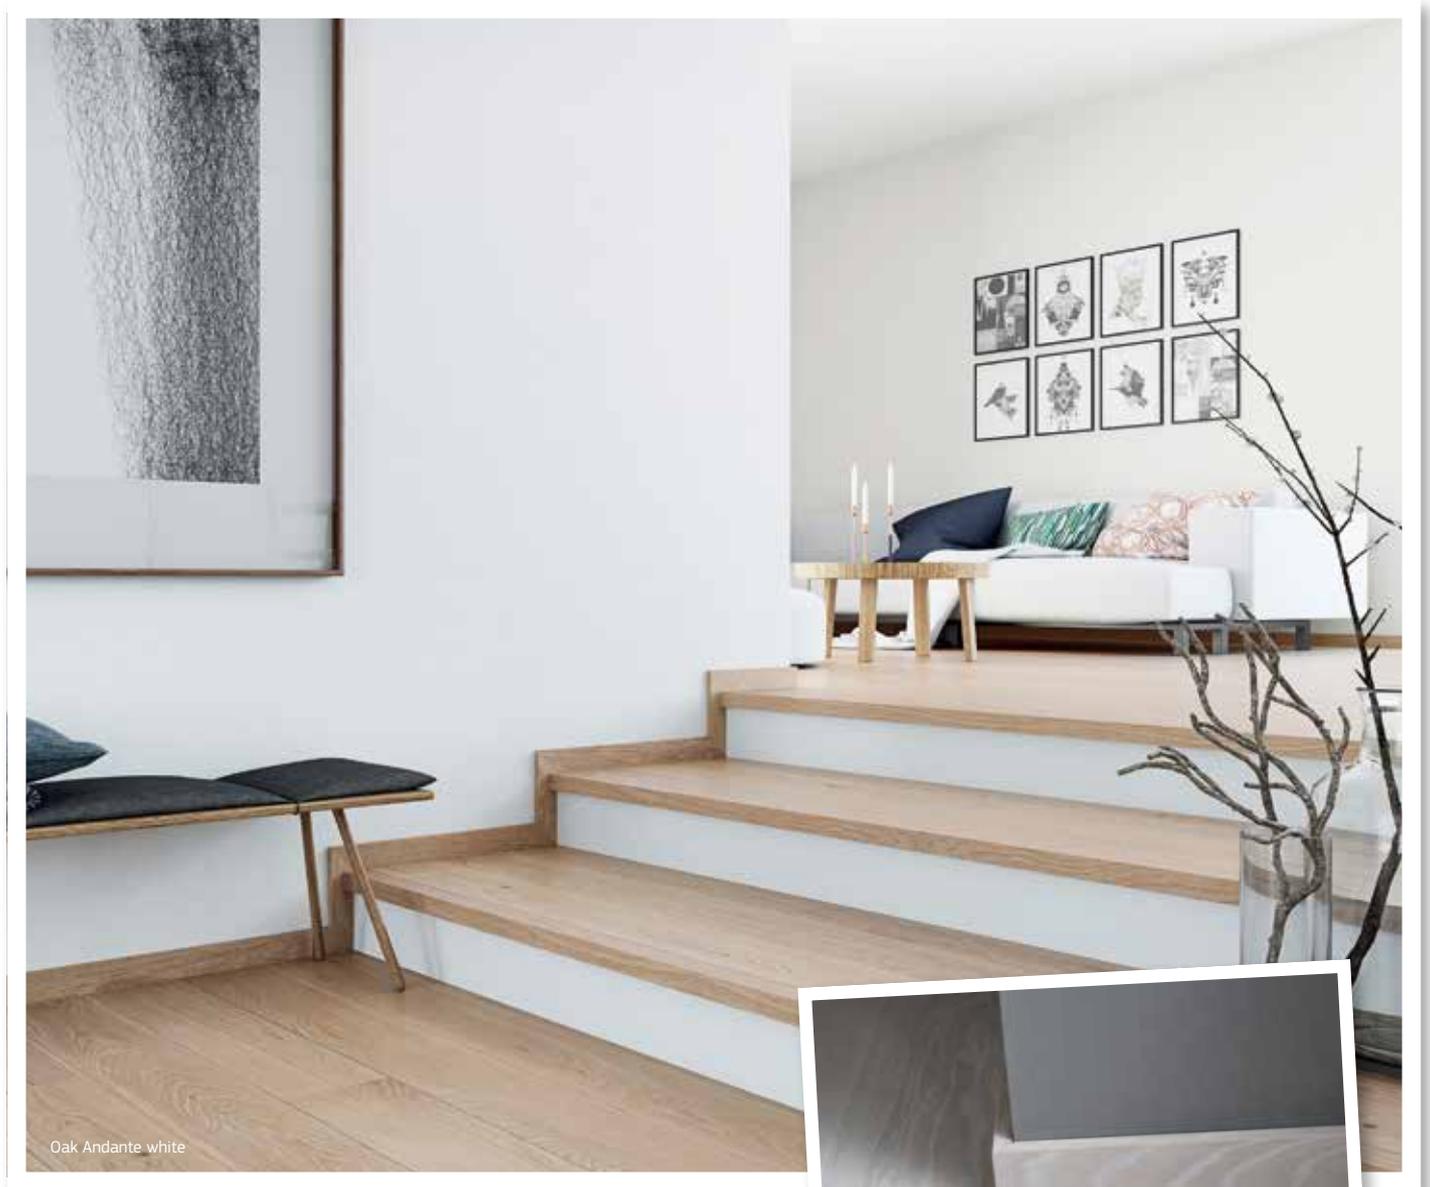

ATTENTION TO THE DETAILS

Stair noses and skirtings

“THE DETAILS ARE NOT THE DETAILS, THEY MAKE THE DESIGN”

Charles Eames

PERFECT DETAILS

Find the details that make the house complete. Make the stairs a feature of your interior that stands out. Enhance your floor with skirtings. The details are what makes the house coherent. See the whole room as an entire project, and select flooring, skirtings, and stairs in the same material. The details will make the house appear naturally combined.

Think about the upstairs-downstairs connection. Very often, the clearest view of a staircase is from the base of the stairs, not from the top. Make sure the stairs complement the flooring on both levels and bind them together.

Ash Andante white

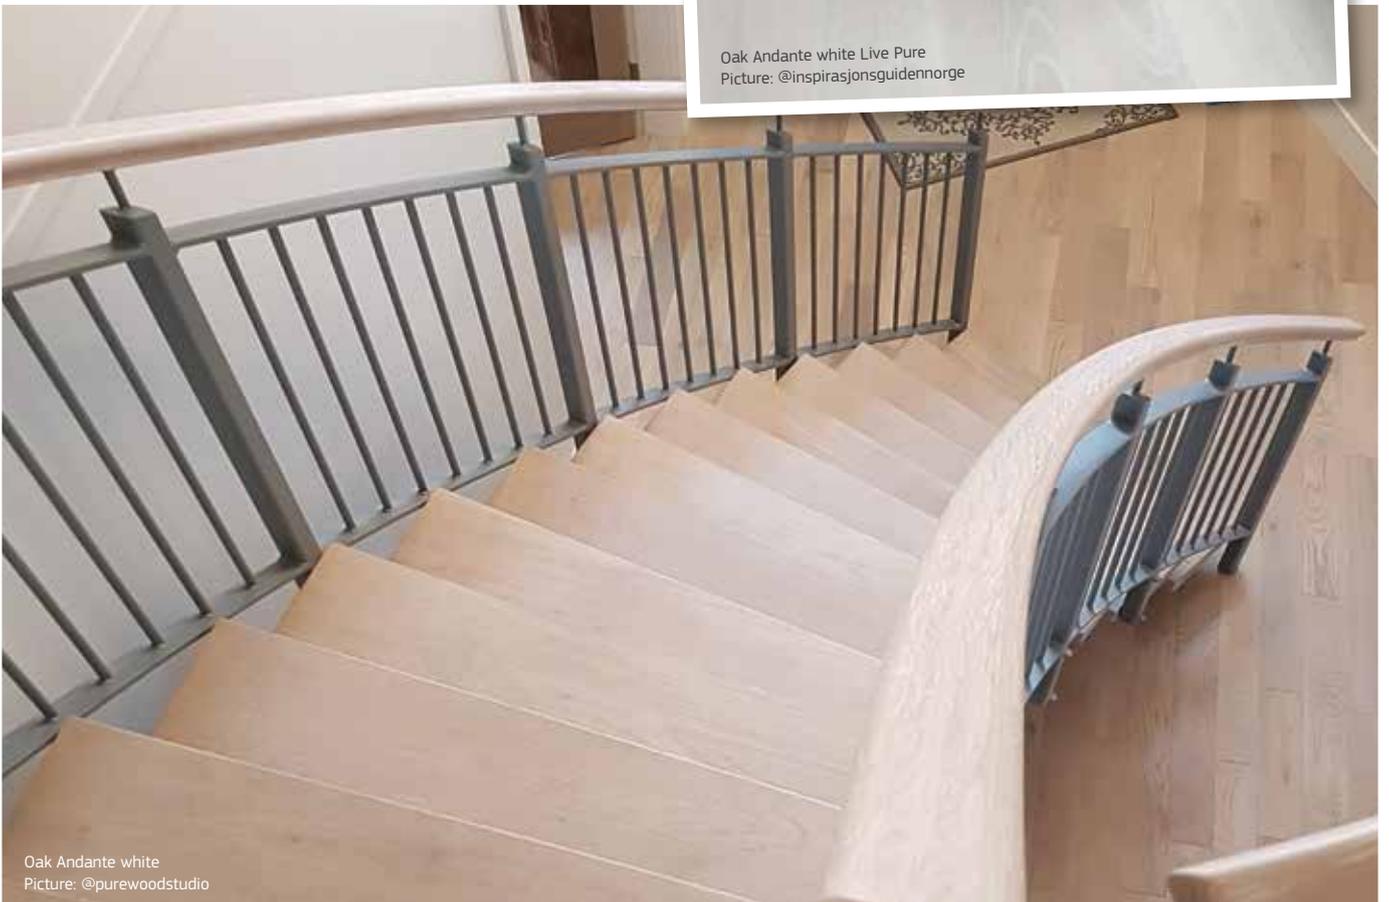

Matching skirtings make the room look complete.

COLOURS FOR EVERY STYLE AND TASTE

When renovating a room or building a house, use your eye to look for the details. Remember, it is the small pieces that make the big picture. Create a seamless connection between floor, skirtings, and stairs. We believe a simple design paired with beautiful colours and structure makes the perfect combination.

STAIRS - MORE THAN A TECHNICAL FEATURE

The staircase is not only stairs, it is also a highly-valued feature and design element. Matching stairs are the communicative link that creates entirety and continuity between the different levels.

Spiral stairs with Oak Fineline flooring
in the NCC headquarter, Denmark.

1. Stair noses made from parquet boards
2. Available for all our floors and colours
3. Outstanding edge strength
4. Fits all types of stairs
5. Tread side-cover for open stairs

NEW

INNOVATIVE FOLDING TECHNIQUE

With this new folding technique – we call it “Origami Tech” – a half bevel makes the edge more “rounded”. The original industrial surface on the edges is preserved because the parquet is bended twice, but never cracked. This makes the edges protected in the same way as the continuing hardwood flooring.

STAIR NOSES FOR INDIVIDUAL SOLUTIONS

BOEN offers matching stair noses for every floor with exactly the same protected surface. Many options let your dream living space come true. From open stairs with required extra side treads to anti-slip inlays for your safety. Creating entirety!

“By using our new milling and folding technology, we translated a manual working process into industrial production which will produce a perfectly manufactured result. This way we help the professional to work efficiently and give the best result to the end customer.”

Andreas Toppel
Product Manager BOEN

YOUR STAIRS. YOUR CHOICE.

NEW

When choosing your stairs, select the design that feels right for you. Pick out the stair model that fits your style and your house. The choice of surface can create an exciting contrast or stand in style with the rest of the interior. Using the same flooring throughout the space will create a clean, continuous appearance.

OPEN STAIRS

Contemporary, light and elegant, open stairs can make an eye-catching statement. Covered with hardwood flooring, you enhance warmth and naturalness.

CLASSIC STAIRS

Wooden stairs have their own charm and enhance the room with their look and scent. Precision work and skilled experience are required from the craftsman to deliver the highest quality.

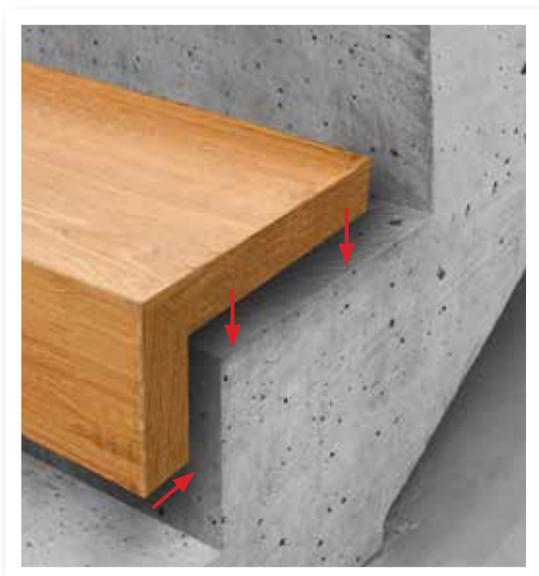

THINK SAFETY

All our stair noses can be delivered with built-in anti-slip inlays. They help to visualize each step and provide additional safety.

EASIER INSTALLATION

Individualize your stairs. Order stair noses and the related top-layer to cover the sides of the steps; perfectly matching your flooring. Side covering is available up to the full size of a parquet board. These side covers can be pre-fabricated to the stair noses.

SEAMLESS CONNECTION

BOEN offers stair noses with a broader tread area (up to 154 mm) to ensure the perfect transition from stairs to the continuing 1-strip floor. It creates a seamless and perfect flow between stairs and flooring. The results are impressive when laying wider plank flooring.

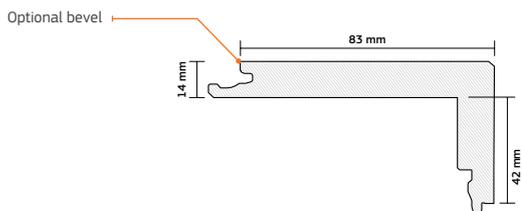

PROFILE OVERVIEW

We offer stair noses made from parquet flooring boards in all BOEN colours, surfaces and formats.

● PROFILES: L/ A

STAIR NOSES FOR BOEN CLIC 3-LAYER PRODUCTS

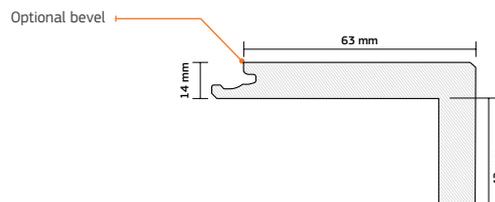

56 x 83 x 2200 mm, single side with click profile at bottom edge.

● PROFILES M/ B

STAIR NOSES FOR BOEN CLIC 3-LAYER PRODUCTS

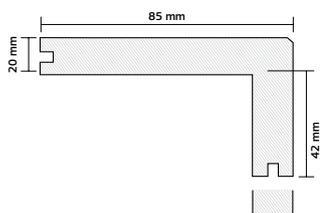

56 x 63 x 2200mm, single side with veneer at bottom edge.

● PROFILES: S/ T

STAIR NOSES FOR CHALET/CHALETINO PLANK

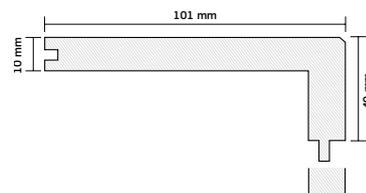

62 x 85 x 1370mm, single side with tongue and groove profile or veneer at bottom edge.

● PROFILES: 1/ 2

STAIR NOSES FOR BOEN PRESTIGE 2-LAYER PRODUCTS

40 x 101 x 1150mm, single side with tongue and groove profile at bottom edge or veneer at bottom edge.

- > Different tread and riser dimensions.
- > Parquet covering to finalize the open sides of your stairs. Thickness: 3.5mm, Size: Up to a whole parquet board.
- > Anti-slip inlays in different widths (1cm, 2cm).
- > Stair noses for other 2-layer products: Maxi, Finesse.
- > Stair noses with 14mm tongue and groove profile.

For more information and special options, please contact the BOEN sales team.

Available colours for the anti-slip inlays

SKIRTINGS

Choose skirtings in the same parquet colour as your flooring and create a beautiful frame that enhances the whole room.

IT IS ALL ABOUT THE DETAILS

Create harmony with the same skirtings as your flooring. This gives the impression of an extended floor. Bring forth a balance; it is the details that create the entirety, and a home. BOEN offers skirtings made from parquet floorboards which ensures that they are exactly the same colour as the flooring. New in the assortment are veneered skirtings in all our BOEN flooring colours.

Use matching skirtings and stair noses to create a uniform look.

BEAUTIFUL

Using the same parquet colour is a detail that shapes the lines of the floor. Remember that white skirtings frame the wall, but create distance to the floor. In contrast, skirtings in shades that match the floor, give the impression of “pulling up” the floor on to the wall, which makes the room appear bigger.

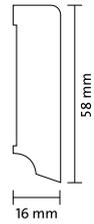

BOEN offers skirtings for all our floors. Please contact our sales team for more detailed information.

NEW

VENEERED SKIRTINGS

For our veneered skirtings you can find them in all our flooring colours. They have rounded edges and a veneered top-layer of 0.5mm. Due to a thickness of 16mm these skirtings are especially useful when you need to cover a bigger expansion gap.

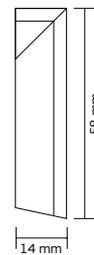

- > Package content: 1 bundle – 10 pieces
- > Dimension: 58 x 16 x 2700 mm

SKIRTINGS MADE FROM PARQUET

These skirting boards are made from our high-quality multi-layer parquet. We produce them in all parquet colours, wood species and formats of the current range. The skirtings can be produced in our lacquered and oiled surface treatments Live Satin, Live Matt, Live Pure and Live Natural.

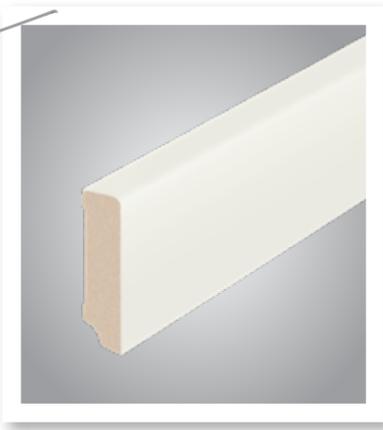

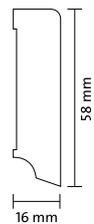

- > Package content: 1 bundle – 10 pieces
- > Dimension: 58 x 14 x 2180 mm

SKIRTING DESIGN 17

Skirtings boards with solid wood core and veneered white.

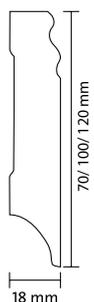

- > Package content: 1 bundle - 8 pieces
- > Dimension: 58 x 16 x 2500 mm

MDF SKIRTINGS

Elegant and classic traditional German profile made with an MDF core and veneered top-layer (RAL 9016).

- > Package content: 1 bundle - 8 pieces
- > Dimension: 70/ 100/ 120 x 18 x 2500 mm

UNDERLAY

Choosing the right underlay is important. A hardwood floor underlay has to be of good quality to reduce movement and risk of squeaks. In addition, you get an underlay with very good audio characteristics.

1

MAXIMA

Maxima is an underlay recommended for wooden sub-floors. Due to its high density, it will return to its original shape when installed under hardwood flooring. Choosing this type of underlay will help the hardwood floor to retain its original features and the risk of unwanted sound from the hardwood floor is reduced.

- › Perfect for wooden sub-floors due to high density (120 kg/m³).
- › On concrete floors, use an additional layer of 0.2mm moisture barrier.
- › Reduces walking sound inside the room with up to 16 %.
- › Best choice for reducing impact sound (structure-borne noise), up to 21 dB.

2

BOENGARD

BoenGard is the recommended underlay for concrete sub-floors. With BoenGard the plastic moisture barrier and the underlay itself is combined into one single product. This makes the laying job much easier and quicker, and the underlay has the same qualities as Maxima.

- › Timesaving when laying on concrete.
- › Do not use on wooden sub-floors!
- › Combined underlay with high density (100 kg/m³) and integrated moisture protection, overlap and self-adhesive strip.
- › Reduces walking sound with up to 10 %.
- › Reduces impact sound (structure-borne noise) with up to 20 dB.

3

VISCOH AIR

High-end Polyolefin foam underlay for all sub-floors. Based on new technology, this underlay has outstanding characteristics with regards to both sound reduction and retention of static and dynamic load.

- › Can be used on all sub-floors, very good shape-adaptability.
- › On concrete floors, use an additional 0.2mm moisture barrier.
- › Reduces walking sound inside the room with up to 30 %.
- › Reduces impact sound (structure-borne noise) with up to 20 dB.
- › Best choice when sound reduction on both walking sound and impact sound are important.

GOOD TO KNOW

- › The sub-floor must be dry, level and self-supporting. Concrete sub-floors must be level and devoid of cement lumps, etc. The tolerance limit ± 3 mm per 2 running metres. For the UK: ± 3 mm over 3 running metres according to British Standard BS8204.
- › Moisture barrier: The floor must not be exposed for moisture from the sub-floor. An additional 0.2mm plastic foil has to be used on concrete floor to insulate against any remaining dampness.
- › Impact sound: Structure-borne noise inside neighboring rooms when walking on the flooring.
- › Walking sound: Noise generated inside the room itself when walking on the flooring.
- › Load resistance: An underlay with higher density or higher dynamic load reduces movement and the risk of unwanted sound both in the room itself and in neighboring rooms.

CARE & MAINTENANCE

*Be nice to your hardwood floor. It will repay you for a lifetime.
High-quality sealed or oiled hardwood floors optimally protect the floor from dust and dirt and are easy to care for.*

The cleaning products are adapted to the various surface treatments. As a general rule lacquered floors should be cleaned with synthetic cleaner (with no grease content) whereas oiled floors should be cleaned with soap (containing grease).

If it is necessary to wipe the floor, use the appropriate cleaning product for the type of flooring. Never pour water onto your

hardwood flooring as the wood might swell and damage the floor. With regular use, a cleaning agent acts as a natural moisturizing agent and the floor surface will become more resistant to soiling and the appearance of wear and tear.
