La cultura del progetto

Agape viene fondata nel 1973 dalla famiglia Benedini. Due fratelli, entrambi architetti, si sono succeduti alla guida dell'azienda. Giampaolo, designer di alcuni dei prodotti di maggior successo, è una figura chiave per l'innovativa interpretazione della stanza da bagno: da luogo funzionale a spazio fondamentale dell'abitare contemporaneo. Emanuele, dagli anni '90 alla direzione, è riuscito a mantenere coerente nel tempo l'estetica delle collezioni, selezionando progettisti a livello internazionale tra i più interessanti del momento. Agape per prima ha proposto una gamma completa di prodotti e accessori per arredare la stanza da bagno, intesa come spazio architettonico.

The tradition of the project

Agape was founded in 1973 by the Benedini family. Two brothers, both architects, have been managing the company and followed one upon the other. Giampaolo designed some of the most successful products and is an essential figure as far as the innovative interpretation of the bathroom is concerned, promoting it from a place of necessity to a key space in contemporary living. Since the 1990s Emanuele manages the company and succeeded in keeping consistent through time the style of Agape's collections by selecting as collaborators some of the most interesting international designers currently active worldwide. Agape has led the way in offering a comprehensive range of products and accessories to decorate the bathroom, conceived as architectural space.

Lo spazio del benessere

Mantova, sede dell'azienda, è città baricentrica tra Milano, capitale della moda e del design, l'Emilia, regione italiana da secoli luogo dei piaceri e qualità della vita ed il Veneto, espressione dell'innovazione ed efficienza produttiva del made in Italy. Agape rappresenta la sintesi perfetta tra questi tre mondi.

Dalla somma di estetica, passione e innovazione nascono nuove interpretazioni del benessere legate alla lettura del tempo come rottura di una routine, come intervallo misurato e consacrato alla cura di sé stessi.

A space for wellbeing

Mantua, where the company headquarters are located, sits in the middle between Milan, capital of fashion and design, and the Emilia region, a place where pleasures and quality of life have been consolidated over the centuries, and the Veneto region, which embodies the innovation and efficient manufacturing that characterises the Made in Italy brand.

Agape is a perfect combination of these three worlds. From the formula aesthetics + passion + innovation springs a new interpretation of well-being, whereby time is seen as a break in routine, as a studied pause consecrated to moments uniquely for us.

L'innovazione Made in Italy

Per risolvere al meglio le esigenze e le caratteristiche dei suoi progetti Agape, grazie anche alla sua posizione strategica, seleziona in Italia i migliori fornitori, i materiali più adatti e i processi produttivi più efficaci per offrire un livello di qualità più elevato rispetto agli standard del mercato. Per questo motivo Agape privilegia rapporti di partnership con aziende e artigiani con i quali è possibile condividere la passione per la ricerca e l'innovazione. In questo modo raggiunge soluzioni esclusive dalla forte identità, che nel tempo sono divenute icone del design. Made in Italy reale, unione di talento creativo e qualità.

Innovation Made in Italy

To address the needs and characteristics of its projects Agape, helped by its strategic location, selects the best suppliers in Italy, the most suitable materials and the most effective production processes to provide a quality level that surpasses the market standard. Agape favours partnerships with companies and artisans who share its passion for research and innovation, thereby enabling it to achieve unique solutions with a strong identity that through time have become design icons. Real Made in Italy, the union between creative talent and quality.

Un mondo in cui immergersi

/ Agape bathrooms traduce il tempo e lo spazio della stanza da bagno in eleganza. Cinque interpretazioni che elevano il valore olistico della stanza da bagno, promossa a elemento centrale della casa, durevole negli anni e appagante nella quotidianità. Non una semplice vetrina, ma reali proposte progettuali che anticipano una dimensione poli-sensoriale, integrando nell'offerta complementi e accessori, oggetti e finiture che restituiscono all'esperienza il giusto livello di intimità.

A world to immerse yourself in

/ Agape bathrooms adds style to the space and use of the bathroom. Five interpretations which heighten the overall value of this room, raising it to a pivotal status within the home, with extensive durability and the meeting of day-to-day needs. Not just a mere showcase but actual design ideas which anticipate a multisensory dimension, including fixtures and accessories, objects and finishes within the range which confer the proper degree of intimacy to the experience.

Il paesaggio nascosto

/ La stanza da bagno immaginata come un paesaggio da contemplare nel proprio privato, un ambiente scenografico, inatteso, che si distingue per la ricercatezza dei dettagli e per una progettualità ambiziosa.

The hidden landscape

/ The bathroom seen as a landscape to be contemplated in the privacy of your own home, a stage set, unexpected, which stands out through the sophisticated details and an ambitious design.

Il rito dell'acqua

/ L'architettura rigorosa degli spazi e il disegno essenziale degli arredi esaltano le ritualità quotidiane legate alla cura del corpo. L'acqua rivela l'ambiente, lo completa, ne diviene il principio e fine.

Water ritual

/ The controlled architecture of the spaces and the understated design of the furnishings enhance the daily rituals linked to personal care. The water reveals the ambiance and completes it, as its beginning and end.

Lo spazio puro

/ La purezza, come espressione del perfetto equilibrio degli opposti, organizza lo spazio in modo lineare, senza eccessi, raccontando un ambiente dalle geometrie essenziali e dai contrasti cromatici decisi.

Pure space

/ Purity, as the manifestation of the perfect balance of opposites, organises the space in a linear fashion, without excess, to describe a space with basic shapes and strong colour contrasts.

Nuovi piani e nuovi contenitori danno vita al programma Evoluzione che comprende tre diverse tipologie di piani, in Exmar, legno o Cristalplant®: ognuna con la sua personalità estetica e tutte con un'estrema versatilità nelle dimensioni. Evoluzione affianca il programma Flat XL, costituendo una proposta ancora più accessibile sul mercato e flessibile grazie alle sue misure personalizzate. Il programma è completato da contenitori modulari, con anta sagomata che ne permette l'apertura senza maniglia, in sintonia con l'essenzialità di questo progetto.

New countertops and new storage units make up the Evoluzione range which comprises three different types of countertops, in Exmar, wood or Cristalplant®, each one with its own aesthetic personality and all with extreme versatility in sizing. Evoluzione joins the Flat XL range for an even wider offer of products on the market, flexible thanks to the custom sizes. The range also includes modular storage units with a shaped door which allows opening without a handle, in line with the understated aspect of this design.

Il programma di docce Flat D prevede ante in cristallo trasparenti, satinate o serigrafate, supporti per pareti che svolgono anche la funzione di erogazione dell'acqua o sono sostegno per la tenda. Le aperture possono essere a battente, scorrevoli o con accesso libero. Possibili soluzioni con o senza piatto doccia con pedane in Exmar, rovere o teak liscio o a doghe. Versioni con elementi portanti incassati nella muratura o esterni. Tutte queste varianti sono alla base del progetto Flat D con il quale si possono realizzare infinite soluzioni personalizzate.

The Flat D range of showers has doors in clear, satin-finish or screen-printed plate glass, and wall mounts which also perform the function of water supply or support for the curtain. The openings can be hinged, sliding or with free access. Solutions are possible with or without shower tray and with footboards in slatted or plain teak, oak or Exmar. Versions with load-bearing elements built into the wall or external. All these variants form the basis of the Flat D design with which endless custom solutions can be created.

Un vastissimo programma di piani in tre spessori (3 – 6 – 12 cm), strutture e contenitori che si integrano con i lavabi Agape per arredare e personalizzare il bagno. Un sistema che permette a ciascuno di trovare una soluzione ideale in ogni senso: nell'estetica, nei materiali, nell'utilizzo dello spazio; con totale facilità d'installazione, perfetta coerenza stilistica e accogliente funzionalità.

A vast range of countertops in three thicknesses (3 – 6 – 12 cm), frames and storage units which integrate with the Agape washbasins to furnish and personalise the bathroom. A range which allows each one to find a solution which is ideal in every respect: in the aesthetics, materials and use of the space, with total ease of installation, perfect stylistic coherence and a functional appeal.

Glossario materiali

1) Legno

Il patrimonio tecnologico della cantieristica navale è un dato fondamentale nella progettazione di elementi in legno per il bagno. L'invecchiamento esalta le naturali doti estetiche del legno aumentando le prestazioni tecnologiche. Esteticamente ciò che più affascina del legno è il suo ciclo di vita, l'aspetto cangiante legato al passare del tempo e delle stagioni misurato attraverso il lento mutare della superficie, delle venature e del colore.

2) Cristalplant® Biobased

Cristalplant® è un materiale eco-sostenibile derivante da materie prime resinose di origine vegetale mescolate a materiali inerti naturali di estrema purezza. La superficie, con effetto "soft-touch" ha un aspetto simile alla pietra naturale che lo rende particolarmente indicato per l'utilizzo nell'ambiente bagno. Il materiale è omogeneo in tutto il suo spessore e può facilmente essere ripristinato.

3) Exmar

Materiale ottenuto dalla composizione di resina e polvere di quarzo. La superficie, con finitura satinata bianca, è setosa, calda e piacevole al tatto. L'applicazione dell'Exmar nella realizzazione di vasche da bagno è ideale poiché il materiale possiede la capacità di trattenere a lungo il calore dell'acqua.

4) Solid surface

Materiale compatto e non poroso, composto in modo omogeneo da 1/3 di resina acrilica e da 2/3 di idrossido di alluminio, un minerale naturale con il quale molte persone si trovano quotidianamente a contatto, poiché costituisce, ad esempio, un componente importante dei dentifrici. Completamente atossico e riciclabile. La superficie si presenta omogenea, setosa al tatto, durevole e facile da pulire.

9) Gomma siliconica
La gomma siliconica è un polimero elastomerico contenente atomi di silicio

e di ossigeno. Il composto è stabile ed irreversibile, le proprietà meccaniche ed elastiche del materiale non subiscono variazioni in intervalli di temperature elevate. Le caratteristiche peculiari della gomma siliconica sono la morbidezza, la totale atossicità e la colorazione pura; qualità che permettono un'applicazione ideale laddove il materiale entra a contatto diretto con il corpo e con l'acqua.

14) Alluminio
L'alluminio è un metallo morbido e leggero con un colore argenteo vivo, dovuto ad uno strato sottile di ossidazione che si forma rapidamente quando è esposto all'aria. È estremamente resistente alla corrosione atmosferica: per tale ragione non richiede nessuna verniciatura di protezione, ma può essere ugualmente trattato con un'ampia gamma di rivestimenti, dalle verniciature alle anodizzazioni colorate. L'alluminio è non magnetico, non tossico e non infiammabile.

10) Technogel®

Materiale poliuretanico a base di gel realizzato senza l'uso di plastificanti. La sua caratteristica principale è la "memoria di forma", anche sottoposto a pressioni ritorna sempre alla sua forma originale. Atossico, non indurisce, non invecchia, non si espande e resta compatto.

11) Ceramica

Impasto di sostanze argillose a struttura compatta modellato e quindi consolidato mediante processi di cottura che ne garantiscono i processi di vetrificazione della superficie, di notevole resistenza meccanica ed elettrica.

12) Marmo

Roccia calcarea cristallizzata e compatta. La produzione Agape utilizza attualmente marmo bianco di Carrara con finitura satinata. I lavabi sono realizzati con lastre unite tramite incollaggio o scavati direttamente su blocco.

13) Acciaio Inox

Il termine acciaio inossidabile (o inox) indica genericamente gli acciai ad alta lega contenenti cromo ed altri leganti che aumentano la resistenza alla corrosione. Materiale con doti di resistenza, durezza ed elasticità molto maggiori di quelle del ferro semplice. I prodotti Agape in acciaio inox subiscono trattamenti superficiali di lucidatura o di satinatura.

Certificazione

I prodotti Agape possono contribuire a soddisfare i requisiti dei crediti LEED®

Agape è socio Green Building Council Italia

Glossary of materials

1) Wood
The technological know-how gained in the ship-building industry is an essential factor when designing wooden components for the bathroom. Ageing enhances the natural appearance of wood, increasing its technological performance. Aesthetically, the most fascinating thing about wood is its life cycle, its changing appearance as time and seasons go by, evidenced by slow alteration of the surface, grain and colour.

2) Cristalplant® Biobased
Cristalplant® is an environmentally safe material deriving from resinous raw materials of vegetable origin mixed to natural aggregates of extreme purity. The "soft touch" surface looks like natural stone, which makes it particularly suitable for use in the bathroom. The material has a uniform structure throughout and can easily be touched up to restore the original finish.

3) Exmar
A composite material formed by a mix of resin and quartz powders. Its white, satin-finish surface is silky, warm and pleasant to the touch. It is ideal for use in the production of bathtubs as it is able to retain the heat of the water for a long time.

4) Solid surface
A compact, non-porous material which is a homogeneous mix of 1/3 resin and 2/3 aluminium hydroxide, a natural mineral with which many people are in daily contact as it constitutes, for example, an important ingredient of toothpaste. Completely non-toxic and recyclable. The surface is smooth, silky to the touch, durable and easy to clean.

5) Ceramilux®
Composite material made with natural mineral content (calcium carbonates and aluminium hydrates) mixed

with polyester resins; coated with polyester-based iso-neopentyllic gelcoat. Ceramilux® is a non absorbent material, resistant to changes in temperature, scratches and abrasion.

6) Parapan®
An acrylic based product, Parapan® is a glossy, solid, monolithic material that is coloured throughout. It is environmentally-friendly, solvent-free, 100% recyclable, extremely durable and its colouring is UV resistant. The acrylic base makes Parapan® waterproof, easy to maintain and particularly suitable for use in moist environments, such as the bathroom.

7) Polyethylene
Polyethylene is part of the family of polymers derived from the monomer ethylene. It is the most common plastic material and is widely used. The possibilities for moulding, colouring and texturing objects, its lightness and its recyclability make polyethylene an ideal material for Agape products.

8) Exacril
Exacril is a methacrylate used for coating with glossy surface (100 gloss units), developed as an alternative to the high-gloss paint finish. Its greater thickness, 1,4 mm, even allows bonding of the edges with highest resistance and durability and enables to repair possible scratches. Its glossy surface is long lasting, retains its original brightness and does not deform; it is heat resistant, waterproof and not absorbent. A non-toxic and ecological product.

9) Silicone rubber
Silicone rubber is an elastomer polymer containing atoms of silicone and oxygen. The compound is stable and irreversible and its mechanical and elastic properties are not subject to alteration at higher temperatures. The specific characteristics of silicone rubber are softness, total non-toxicity and purity of

colour. These qualities make it ideal for use where the material comes into direct contact with the body and water. Its flexibility allows easy removal of any lime scale deposited during use of the product.

10) Technogel®
A gel-based polyurethane material, made without using plasticizing agents. Its main characteristic is its "memory"; even when subjected to pressure, it always returns to its original shape. It is non-toxic, does not harden, age or expand and remains compact.

11) Ceramic
A mixture of clayey substances with a compact structure that is moulded and then hardened by firing, which causes the surface to vitrify and acquire great mechanical and electrical resistance.

12) Marble
Marble is a compact, crystallized, calcareous rock. Agape currently uses white Carrara marble with satin-finish for its products. Washbasins are made from slabs joined together by gluing or carved directly out of the block.

13) Stainless steel
Stainless steel is the generic term for high alloy steels containing chromium and other alloying elements that increase resistance to corrosion. A material that is much stronger, harder and more resilient than plain iron. Agape stainless steel products are surface-treated to give a polished or satin finish.

14) Aluminium
Aluminium is a soft, light metal, with a bright silver colour due to the thin oxide layer which quickly forms when it is exposed to the air.

It is extremely resistant to atmospheric corrosion and therefore does not require any protective varnish, although it can take a wide range of finishes, from varnish coating to coloured anodising treatments. Aluminium is neither magnetic, nor toxic,

nor flammable.

15) Brass
Brass is an alloy of copper and zinc and forms part of the wider bronze family. It is a very useful metal because it is tough yet easy to work. Agape brass products are chromium-plated with a polished or satin finish.

16) Crystal glass
Consisting mainly of silicates, it is obtained by fusing siliceous sand with oxides and carbonates. Because of its perfect transparency, inalterability and its ability to react to light in different ways, crystal glass is particularly suitable for juxtaposition with the other materials used by Agape for its product ranges. Parts are joined using special adhesives that ensure perfect transparency and continuity of the material.
